## 88 Scott: Crane Installation

Located in the heart of Toronto's Financial District and consisting of a five-storey podium of boutique office and retail space as well as a 58-storey condominium tower, 88 Scott is a grand addition to the city's ever-evolving skyline.

After having broken ground in March, 88 Scott has reached an exciting milestone. Excavation has reached the depth of what will be this condominium tower's foundation - six subterranean storeys below grade - and the first crane has now been installed at the foundation's deepest point.

Prior to the crane installation, Bird excavated an additional storey in order to pour the reinforced concrete that will ultimately support a 200-foot-tall crane. If you find yourself wondering just how a crane is erected, [click here](#) to check out a short time lapse video.
